

ERICSSON MOBILE ORGANIZER 5.1 – PUSH E-MAIL

Ericsson Mobile Organizer (EMO) offers easy-to-use, continuously updated e-mail, calendar and contacts list on mobile devices.

With all the recent technological advances, we can work just about anywhere now—on planes, in taxis or at remote job sites. But at the same time, we have become increasingly dependent

on our office intranet information. Having access to e-mail, calendar and contacts is an essential tool for communication internal as well as external. With the latest generation of Ericsson Mobile Organize 5.1, enterprise users can access corporate e-mail and other Personal Information Management (PIM) data when on the move.

Features and benefits

Easy-to-use

Work easily with your e-mail, calendar, contacts, tasks and public folders. You receive your e-mail automatically via the mobile network, with no action required on your part.

Easy to install

EMO is simple to install and involves minimal disruption to an enterprise's network, security and e-mail infrastructure. Fast and simple installation means rapid returns on investments (ROI). Moreover, IT management has full control of the installation process.

Device independence

EMO is device independent and works on most Symbian smartphones, as well as on Microsoft Windows Mobile smartphones and PDAs.

Communications

Using EMO is as simple as switching on your mobile device. The software automatically handles all data communication actions in the background.

EMO utilizes true push technology, which is optimized to keep the contents of your mobile device always up-to-date with your corporate e-mail server over a mobile network.

- Alerts as new mail are received; no need to poll for new messages
- Work online or off; no need for constant mobile coverage
- Network connections established and maintained automatically
- Full real-time, bidirectional, automatic synchronization over the air
- Option for remotely suspending the service temporarily
- Data compression, typically 2:1 reduction will reduce the cost of GPRS/UMTS traffic

Different character sets and languages are supported.

E-mail functionality

EMO enables you to manage your e-mail via your smartphone or PDA, in real-time, wherever you may be. The table below describes the main e-mail features of the solution.*

- View messages in real-time, receive data on smartphones, PDAs and desktop computers simultaneously
 - View read/unread status, sender, subject and received date
 - Sort mail lists by sender, subject or received date
 - Delete, reply to sender, reply to all, or forward a message (smart forwarding of attachments)
 - Respond (accept, tentatively accept or decline) to meeting request e-mails
 - All actions mirrored to desktop view in real-time, over the air
 - Display and edit original messages on replying or forwarding
 - Perform basic text edit clipboard operations (cut, copy and paste)
 - Receive attachments in native format, e.g. Pocket Word, Excel, PowerPoint and PDF.
 - View, save, edit and send attachments as if at a desktop
 - Configurable message truncation download size from 0 KB (subject line only) and up
 - Truncated text and attachments rapidly downloaded, when requested, in the background
 - Identify and add addressees from contacts list
 - Resolve incomplete e-mail addresses using Outlook Contacts
 - Save messages to a drafts folder
- * Device specific limitations apply.

Calendar

EMO enables you to manage your calendar while out and about as if you were at the office. When calendars are shared, or managed centrally, productivity is significantly enhanced. The table below describes the main calendar features of the solution.

- View, edit and update existing calendar entries either on a mobile device or at a computer desktop
- Display calendar data in standard Outlook or Notes formats
- All calendar actions mirrored to the desktop view in real-time, over the air
- All calendar actions mirrored to the mobile device calendar in real-time, over the air
- Set reminders, add notes to an appointment
- Meeting request responses added to calendar entry and mirrored to desktop view

Contacts and Global address list

EMO enables you to manage your contacts while out and about as if you were at the office. When new contacts are entered or modified on a mobile device, this is directly mirrored on your desktop computer, and conversely, when new contacts are entered on your desktop computer, they become available on your mobile device. Instantaneous searching of enterprise global e-mail address books is also provided.

Security

End-to-end encryption ensures that delivery of all data communicated to and from a mobile device is secure.

- 128-bit, end-to-end, AES encryption
- Entire message, not just body text, is encrypted
- No additional opening of inbound firewall ports are required
- PointSec interoperability for device encryption (Enterprise ed)
- Device wipeout in case of lost mobile device (Enterprise ed)

Technical data

Device requirements

EMO supports both Symbian OS and Windows Mobile devices (please refer to certified devices document for a complete list):

- Symbian UIQ (SonyEricsson) devices
- Symbian Series 60 (Nokia) devices
- Symbian Series 80 (Nokia) devices
- Windows Mobile 2003 Phone Edition devices
- Windows Mobile 2003 smartphone devices
- Windows Mobile 2005 Pocket PC Phone Edition devices
- Sony Ericsson Java client (Q2 2006)

Supported Email Servers

EMO supports both Microsoft Exchange and Lotus Domino servers:

- Microsoft Exchange 5.5
- Microsoft Exchange 2000 SP3 with Post-Service Pack 3 Rollup
- Microsoft Exchange 2003 SP1
- Lotus Domino 5.0.9 or higher
- Lotus Domino 6.0.3 or higher
- Lotus Domino 6.5

System requirements

- Push Connector – Windows 2000 SP3 or 2003 server
- Relay server – Sun Solaris 9

Network

- Currently used with CDMA 2000, UMTS, GSM and GPRS
- Network independent
